

CLEARBROOK

Well Water Sink Filter

SAFE, CLEAN WATER FOR KITCHEN & BATH SINKS

For Drinking, Cleaning and Washing Dishes

Clearbrook Well Water Sink Filter fits neatly under your kitchen or bathroom sink to filter your well water so that you and your family can be safe and enjoy safe and clean water for drinking, washing veggies, dishes, or washing your hands and face.

Why Multi-stage Filters?

Well water does not undergo the pre-filtering that municipal water does, so it requires an additional stage of filtration to remove sediment before it reaches the primary filter. This increases the life and effectiveness of the primary filter, reducing maintenance costs and saving you money.

Modular Design - Choose the Filters that are Right for You

Stage I: Pre-Filters

The first stage is a cleanable, re-useable pleated pre-filter designed to remove sediment as well as other biological contaminants. It comes in three options with varying proportions of flow rate and sediment removal.

High Sediment (50 microns) | Medium Sediment (20 microns) | Low Sediment (5 microns)

Stage II: Iron & Sulfur Filter

Not all households require one or more Specialty Filters, but some homes may have a high incidence of certain naturally occurring minerals or man-made contaminants that require special treatment. Clearbrook offers a variety of filter formulas, including Iron & Sulfur Reduction.

Stage III: Primary Filter

Clearbrook uses a very special blend of catalyst combined to reduce contaminants by 99.99% or more including Volatile Organic Compounds (VOC's), lead and other Heavy Metals, Cysts, E Coli, Guardia, Cryptosporidium, taste and odors.

Easy to Install, Simple to Maintain

The Clearbrook Well Water Undercounter Sink Filter System comes with everything you need for installation, including easy-to-understand installation instructions, and can be installed with just a few common household tools. It fits neatly under any sink, and is easily maintained by periodically cleaning or replacing the Stage I filter. The Stage II and III filters last for 1 year.
